

# Landscape Lighting

---

Designed by Aqualux

When night falls, a landscape lit with skill and intent can be transformed into a visual wonderland full of texture and intrigue. Blending function and form in a way only light can achieve, landscape lighting is a space where art meets science (and safety).

Aqualux Lighting for more than 15 years has been at the forefront of Australian landscape lighting design and manufacture. From our Sydney-based design and manufacturing facility to our national network of resellers and speciality lighting stores we have helped bring some wonder into countless homes and outdoor spaces around the country.

In 2021, Aqualux commenced a significant investment in our local manufacturing facilities, providing the foundation for continued growth and support of our customers well into the future.

## Aqualux Design

At the heart of each product is a need. Identified and often in collaboration with our customers, the requirement for a particular type of lighting effect is explored and researched, simulated, and prototyped. The form should follow the function yet the process is often emergent rather than self-evident. It requires a commitment to first principles and always the question to be asked: what is it for, who is it for and how will it be made.

From Dieter Rams to Naoto Fukasawa, a line can be drawn that connects the goal of good design and the sense of harmony that should follow. This sense should encompass not only the aesthetic but also the internal construction and the installation process - good design is not superficial.

Aqualux approaches all of its product design challenges with the same principle in mind - what will achieve the objective in the most elegant way possible. This principle is applied continuously from the design phase through to manufacture and installation, including the impact on the visual environment during its lifetime as a luminaire and the environmental load created during and at the end of the product life cycle.

Engineering a balanced product that exceeds expectations in performance requires a deep understanding of the components that operate within. Our electronics engineering has always been pushing forward, rarely accepting off-the-shelf solutions when a custom-developed approach will suit better.

Advanced test and engineering equipment is necessary for this process to occur and for products to be developed that are safe, compliant, and performant. The Aqualux Lab continues to grow and is the place where our future is engineered.

## Aqualux Manufacturing

For more than 30 years, Telectran & Aqualux have been involved in manufacturing both locally in Sydney and internationally. Operating a manufacturing facility requires constant attention to both small details and broad trends and movements. Over the years we have honed our ability to react quickly and nimbly to the market and other forces that shape our world.

When many of the Australian lighting companies moved their manufacturing operations overseas Aqualux adopted a flexible strategy that sought to combine the best of both worlds. We established long-term relationships with overseas suppliers, many of whom remain close friends and partners to this day.

At the same time, we retained our local manufacturing facility, predicting a time would come when the wind shifted and Made in Australia would one day be more than just a sticker and people would actively seek our locally made product.

When the global pandemic upended long-standing patterns of global trade and international relations, we began a sustained program of investment in our local manufacturing capabilities, building a state-of-the-art machine shop to fabricate our advanced luminaires from raw materials through to finished product.

As part of this investment, we recently added a fully integrated CNC machine shop, our own powder coating line, surface finishing line, and much more. Additive manufacturing also plays a growing role in the many aspects of product development and production.

During this expansion, we have brought in more team members with many more planned over the next few years as we extend our capabilities and provide a growing platform for our customers to achieve their vision.

## Sustainability Plan

### Net Zero

Building a sustainable future for ourselves and the planet involves taking care of our environment and attempting to minimise our demand on the ecosystem services that the earth provides (for free).

This includes reducing energy consumption, selecting renewable energy over fossil fuels, eliminating single-use plastics and landfill generation as well as a myriad of other measures that together add up and make a difference.

### Energy use

At the Aqualux factory and offices, 100% of our electricity comes from renewable sources. This costs us more than the standard electricity rate, however, we believe it is important to take whatever action we can to help foster a truly renewable and sustainable future, and choosing to buy renewable energy is one of the easiest ways to do this.

### Singe-use plastics

Several years ago we decided we were going to try and eliminate all plastics in our packaging supply chain and shipment operations. This meant educating both our overseas suppliers as well as investing in paper-based shipping equipment and biodegradable (home compostable) shipping satchels.

We no longer use plastic packing tape, our bubble wrap is 100% plant-derived and one of our last uses of plastic (pallet wrapping) is about to move to an Australian-made bio alternative.

### Production processes

With the introduction of our new powder coating line also comes a pre-treatment process that involves several tanks to clean, prepare and protect raw luminaire bodies prior to coating.

We have invested in a fully closed-loop ion-exchange system that will effectively filter the system wastewater, refreshing the rinse tanks to near-total purity.

### Factory lighting

Being an integrated lighting design and manufacturing company, it only makes sense that our production floor lighting would be energy efficient.

However, we went one step further when recently refitting our factory and designed ourselves a custom linear lighting system that features ultra-low glare (UGR < 17) optics and the latest generation of CREE mid-power LEDs.

By ensuring the light is delivered where we need it (at the production workbench level) and stray light and glare minimised, even greater efficiencies are achieved.

# Architectural RGBW Lighting

## Architectural and Commercial Lighting

Dynamic illumination of exterior facades and features is a great way to highlight many different types of buildings, artworks and installations.

Aqualux provides a full suite of products and project support from concept development to systems integration, maintenance and programming.

Integrating our own lighting fixtures with world-class control technology, Aqualux can provide energy efficient, colour changing lighting solutions that can be used to promote events, recognise charities and sporting team achievements as well as add more visual interest to a building or feature.

### Lumena PRO Fixtures

A full range of commercial grade fixtures to illuminate many types of projects from small, high-end residential to large public space and hospitality venues.

- AQL-180/157/158/980/985 RGBW High Powered Luminaires
- AQS-500/510 Neon Flex
- Underwater RGBW Lights

### Services

- System design & integration
- Circuit design
- Programming
- Maintenance

### Control Systems

Wide range of control system products and integration services to cover many scenarios, including remote, off-site control.

- Madrix
- Nicolaudie
- Enttec
- L-TECH
- Casambi
- DALI
- CBUS
- Dynalight
- Integration with RTI, AMX, Crestron, Control 4

# Photometric Planning & Design

Aqualux provides free photometric planning services for projects utilising our lighting products.

Simulations to evaluate minimum and average horizontal illuminance, uniformity, glare and light spill and pollution are all included.

Designed to meet various Australian standards, including AS1158 for Roadways, Carparks and Pedestrian access and

AS2560 for various sporting fields and activities.

Accurate simulations can be essential in providing collateral support for a project including council approval, customer signoff and stake-holder engagement.

# What makes an Icon?

At the base of each product page are a series of icons. The icons are a quick reference guide to learn relevant product info at a glance.

Following is the complete set of icons with their definitions and descriptions.

## Lumen Maintenance 80

The LM-80 standard is the IESNA approved method for determining lumen maintenance of LED light sources, e.g. how quickly the light output of an LED source degrades over time. It deals with actual measurements only.

## Luminaire Report

The LM-79 test report provides details about the performance of a total luminaire package, including wall-to-lumen efficacy, luminous flux, luminous intensity distribution and CCT / CRI details.

## Ingress Protection 20

Vertically dripping water shall have no harmful effect when the enclosure is tilted at an angle of 15° from its normal position. A total of four positions are tested within two axes.

## Ingress Protection 65

Water projected by a nozzle (6.3 mm (0.25 in)) against enclosure from any direction shall have no harmful effects.

## Ingress Protection 66

Water projected in powerful jets (12.5 mm (0.49 in)) against the enclosure from any direction shall have no harmful effects.

## Ingress Protection 67

Ingress of water in harmful quantity shall not be possible when the enclosure is immersed in water under defined conditions of pressure and time (up to 1 meter (3 ft 3 in) of submersion).

## Ingress Protection 68

The equipment is suitable for continuous immersion in water under conditions which shall be specified by the manufacturer. It can mean that water can enter but only in such a manner that it produces no harmful effects.

## 3 Year Warranty

In addition to the statutory warranty of 1 Year. This is on the condition that Aqualux lighting products are fit-for-purpose and installed professionally or by similarly qualified persons and that all guidelines and requirements are followed.

## 10 Year Warranty

In addition to the statutory warranty of 1 Year. This is on the condition that Aqualux lighting products are fit-for-purpose and installed professionally or by similarly qualified persons and that all guidelines and requirements are followed.

## 5 Step MacAdam

The colour point binning specifies the range of colours within which all LEDs are first supplied.

## Solvent Resistant

Offers resistance to common domestic solvents and cleaning agents. Not including industrial strength cleaners, acids or alkalines.

## Vertical Bending Direction

Only bends in the vertical bending direction. Twisting or bending horizontally will damage to Neon Flex. Each Neon Flex Product has a safe minimum bend radius.

## Warning

A statement or piece of information that tells people that there might be a danger or a problem in the future.

## 2 Year Warranty

In addition to the statutory warranty of 1 Year. This is on the condition that Aqualux lighting products are fit-for-purpose and installed professionally or by similarly qualified persons and that all guidelines and requirements are followed.

## 5 Year Warranty

In addition to the statutory warranty of 1 Year. This is on the condition that Aqualux lighting products are fit-for-purpose and installed professionally or by similarly qualified persons and that all guidelines and requirements are followed.

## 3 Step MacAdam

The colour point binning specifies the range of colours within which all LEDs are first supplied. 3 Step MacAdam, it is not possible to detected colour nuances between individual luminaires.

## Salt Water Resistant

Offers resistance to corrosion and degradation in salt water environments.

## Ultra Violet Protection

Offers protection from degradation and fading due to UV exposure in sunlight.

## Horizontal Bending Direction

Only bends in the horizontal bending direction. Twisting or bending vertically will damage to Neon Flex. Each Neon Flex Product has a safe minimum bend radius.

## Direct Current 24 Volts

Requires 24V DC constant voltage for correct operation.

# Taking the limelight

Aqualux is introducing three new fittings: The AQL-122 path light, AQL-880 ceiling light and the AQL-985 compact projector. These new luminaires complement our existing range and are a direct result of customer feedback as well as Aqualux innovation.

Path Light

## AQL-122

The AQL-122 is an elegant pathlight that can blend perfectly into both modern and traditional settings.

Offering offset, diffuse light projection suitable for path and wayfinding applications, the AQL-122 is fully machined in our Sydney facility and available in our standard powder coat options as well as custom finishes to suit multiple project requirements.

(Flat White)

Ceiling light

## AQL-880

Adding to our LumenaPro Range, the AQL-880 Ceiling Light is a configurable down light with applications ranging from domestic outdoor use to commercial and architectural interiors.

CNC Machined in Aluminium and finished in a selection of Dulux Powder Coat options, the AQL-880 is perfect for exteriors that need an IP-rated downlight solution and features multiple configuration options including 10/20W outputs, 2700K - 6500K CCT, RGBW, Integrated DALI or DMX.

AQL-880-A3  
(Medium Bronze)

AQL-880-A4  
(Venerable Silver)

AQL-880-A8  
(Flat White)

Compact Projector

## AQL-985

The AQL-985 is a sub-compact architectural projector with a multitude of configurable options and features.

With a range of advanced technologies including the latest generation of ultra-high efficacy LEDs and a multi-channel LED Driver configuration, the AQL-985 combines extreme output efficiency and redundant design for critical environments where failure is not an option.

AQL-985-A1  
(Silver Reign)

AQL-985-A2

# Marina Mirage

GOLD COAST - QLD

Aqualux was involved from the concept development stage through to the design and installation process, along with Alpha LED and Wolfie IT. The project brief was to illuminate the sails of the landmark Marina Mirage shopping center and utilise the structure as a canvas for RGB illumination according to various events and other lighting requirements.

#### **PARTNERS**

Alpha LED and Wolfie IT

#### **LOCATION**

Marina Mirage QLD

#### **PROJECT BRIEF**

27 x AQL-912

27 x AQL-913

**Designed to provide the ultimate in design freedom and quality of workmanship.**

Modern landscape design demands modern lighting solutions.

One creation from  
our new CNC

The Australian Made AQL-880 Projector

# Backyard Bliss

BAY STREET - VIC

The lengthened driveway leads you to several luminous steps using AQS-400 guiding you to the Palm lined Colonial Beach Estate. The inviting tropical leading lines are created using AQL-132 Spike Uplight and AQL-400 Spike Spotlights. The outdoor entertaining log fireplace is uplit with AQL-155's with an Asymmetric Beam Angle to minimise light flare and direct light where it is needed adding to the already elegant hidden sanctuary.

## TECHNICAL

**Product Code** AQS-421 **IP Rating** IP65 **Working Mode** Constant Voltage (PWM) / DMX **Max Length** (Single Power Feed) 10m  
**Max Length** (Double Power Feed) 20m **Cut Interval** 66mm **Bend Direction** Horizontally **Minimum Bend Diameter** 80mm  
**LED Type** SMD5050 **LED Qty / M** 90pcs **Lumen Maintenance** 70,000 Hours L70@ 25°C, 50,000 Hours L70@ 50°C  
**Materials** Silicone **Emission Angle** 120° **Operating Temperature** -20° to +40°C **Installation Temperature** 5° to +35°C  
**Warranty** 3 Year Aqualux Warranty

# Cut to the chase

When measuring Neon Flex and Strip Lighting lengths for your project, don't forget to consider the requirements necessary for an accurate cut.

## Cut intervals

Neon Flex and Strip Lighting have fixed cut intervals, these cut intervals determine the overall length, each product has its own cut interval length.

## Tolerances

Remember to allow for manufacturing tolerances when designing your strip lighting solution. These are mentioned in the datasheet.

## Power supply

Single and double-ended power supplies need to be considered. Each product will have a maximum single-end run length before a double-end power supply is needed. There is a maximum double-end power supply run length before a new circuit is required.

## Extrusions

Extrusions are made to fit specific products using clips and channels in Stainless Steel, Polycarbonate, or Aluminium. Most common lengths are straight, although some products offer bendable options.

## Cable entry

All products have a cable entry point. Some products have only one option, while other products offer side, bottom, or direct cable entry points.

## Gaps and endcaps

Physical allowances need to be made when using products with endcaps and cable entry points.

Check how long the endcap and cable entry is, they usually do not fit into the extrusion. The type of cable entry (side, bottom, or direct) will determine how much of an allowance is necessary for safe use.

Minimal tolerances need to be met. Before creating a run-length using multiple lengths, including the placement of cable entry points to power supplies.

# Getting connected

Standardising Neon Flex cable entries for Anti-Siphon and Quick Connect applications is as easy as D, S, B.

## Anti-Siphon Cable Entry Options

Direct Cable Entry

Side Cable Entry

Bottom Cable Entry

# Staying in the groove

A range of Neon Flex extrusion and mounting clips in Polycarbonate, Aluminium and Stainless Steel.

# AQF-G-001

**TECHNICAL**

**Product Code** AQF-G-001 **Available CCT** 2500K **Construction** Polycarbonate Lens **IP Rating** IP44 (Globe Only)  
**Input Voltage** 24V AC / DC **Power** 0.5W **Lamp Base** E27 **L70** 30,000 hrs **Dimensions** 45.5 x 69.5mm  
**Dimming** PWM (DC) / Phasecut (AC) **Warranty** 3 Year Aqualux Warranty

| Product Code | CCT   | Voltage     | Watts                 | Lumens                |
|--------------|-------|-------------|-----------------------|-----------------------|
| AQF-G-001    | 2500k | 24V AC / DC | 0.5W (AC) / 0.3W (DC) | 45lm (AC) / 18lm (DC) |

Specifications subject to change, always check website for the latest details.

# AQF-G-002

**TECHNICAL**

**Product Code** AQF-G-002 **Available CCT** 2000K **Construction** Polycarbonate Lens **IP Rating** IP44 (Globe Only)  
**Input Voltage** 24V AC / DC **Power** 0.5W **Lamp Base** E27 **L70** 30,000 hrs **Dimensions** 45.5 x 69.5mm  
**Dimming** PWM (DC) / Phasecut (AC) **Warranty** 3 Year Aqualux Warranty

| Product Code | CCT   | Voltage     | Watts                 | Lumen                 |
|--------------|-------|-------------|-----------------------|-----------------------|
| AQF-G-002    | 2000k | 24V AC / DC | 0.5W (AC) / 0.4W (DC) | 28lm (AC) / 18lm (DC) |

Specifications subject to change, always check website for the latest details.

# AQF-G-003

**TECHNICAL**

**Product Code** AQF-G-003 **Available CCT** 2700K **Construction** Polycarbonate Lens **IP Rating** IP44 (Globe Only)  
**Input Voltage** 24V AC / DC **Power** 1W **Lamp Base** E27 **L70** 30,000 hrs **Dimensions** 45.5 x 69.5mm  
**Dimming** PWM (DC) / Phasecut (AC) **Warranty** 3 Year Aqualux Warranty

| Product Code | CCT   | Voltage     | Watts                 | Lumens                |
|--------------|-------|-------------|-----------------------|-----------------------|
| AQF-G-003    | 2700k | 24V AC / DC | 0.9W (AC) / 0.4W (DC) | 60lm (AC) / 26lm (DC) |

Specifications subject to change, always check website for the latest details.

# AQD-400-WIFI 106

**TECHNICAL**

**Product Code** AQD-400-Wifi 106 **Output Signal** PW-CV Protocol 2.4GHz Wifi, 802.11b/g/n **Dimming Range** 0 - 100%  
**Control Distance** Max 100m (line of sight) **Cable** 2.5mm<sup>2</sup> **Warranty** 5 Year Aqualux Warranty

| Product Code     | Input Volage | Output Power | Channels | Output Control         |
|------------------|--------------|--------------|----------|------------------------|
| AQD-400-Wifi 106 | 12 ~ 24V DC  | 192W / 384W  | 4        | Dimming, CT, RGB, RGBW |

Specifications subject to change, always check website for the latest details.

# AQD-400-T3-CV

### TECHNICAL

**Product Code** AQD-400-T3-CV **Modes** Single Colour / CCT Tuning / Dimming Remote T1/T2/T2M/T3/T3M/T3X  
**Range** 30M (Location Dependant) **Power** 5V / 12V / 24V **Warranty** 2 Year Aqualux Warranty

| Product Code  | Frequency | Voltage     | Watts             | Load                 |
|---------------|-----------|-------------|-------------------|----------------------|
| AQD-400-T3-CV | 2.4GHz    | 12 ~ 24V DC | 90W / 216W / 432W | 3CH x 6A - 18A Total |

Specifications subject to change, always check website for the latest details.

# AQD-400-T4-RGBW

### TECHNICAL

**Product Code** AQD-400-T4RGBW **Modes** Single Colour / Colour Changing Programs / Custom Receiver AQD-400-T4CV  
**Remote** AQD-400-T4 Range 30M (Location Dependant) **Power** 5V / 12V / 24V **Warranty** 2 Year Aqualux Warranty

| Product Code   | Frequency | Voltage     | Watts       | Load                 |
|----------------|-----------|-------------|-------------|----------------------|
| AQD-400-T4RGBW | 2.4GHz    | 12 ~ 24V DC | 240W / 480W | 4CH x 5A - 20A Total |

Specifications subject to change, always check website for the latest details.

# AQD-400-LT912-OLED

## TECHNICAL

**Product Code** AQD-400-LT912-OLED **Modes** Dimming / CT / RGB **Output Power** (0 ~ 48W...96W x 12CH Max. 1152W)  
**DMX Interface** 5-pin XLR, RJ45, Green Terminal **Grey Level** 8 Bit (256 levels) / 16 Bit (65536 levels) **Photoelectric Isolation** Yes  
**Protection** Short Circuit / Over Load **Warranty** 2 Year Aqualux Warranty

| Product Code       | Input Voltage | Dimming Curve | Input Signal | Load                |
|--------------------|---------------|---------------|--------------|---------------------|
| AQD-400-LT912-OLED | 12 ~ 24V DC   | 0.1 ~ 9.9     | DMX512 / RDM | 12CH x 4A - Max 48A |

Specifications subject to change, always check website for the latest details.

# AQD-400-LT916-OLED

## TECHNICAL

**Product Code** AQD-400-LT916-OLED **Modes** Dimming / CT / RGB / RGBW **Output Power** (0 ~ 36W...72W x 16CH Max. 1152W)  
**DMX Interface** 5-pin XLR, RJ45, Green Terminal **Grey Level** 8 Bit (256 levels) / 16 Bit (65536 levels) **Photoelectric Isolation** Yes  
**Protection** Short Circuit / Over Load **Warranty** 2 Year Aqualux Warranty

| Product Code       | Input Voltage | Dimming Curve | Input Signal | Load                |
|--------------------|---------------|---------------|--------------|---------------------|
| AQD-400-LT916-OLED | 12 ~ 24V DC   | 0.1 ~ 9.9     | DMX512 / RDM | 16CH x 3A - Max 48A |

Specifications subject to change, always check website for the latest details.

# AQD-400-LT924-OLED

## TECHNICAL

**Product Code** AQD-400-LT924-OLED **Modes** Dimming / CT / RGB **Output Power** (0 ~ 36W...72W x 24CH Max. 1728W)

**DMX Interface** 3-pin XLR, 5-pin XLR, RJ45, Green Terminal **Grey Level** 8 Bit (256 levels) / 16 Bit (65536 levels)

**Photoelectric Isolation** Yes **Protection** Short Circuit / Over Load **Warranty**

| Product Code       | Input Voltage | Dimming Curve | Input Signal | Load                |
|--------------------|---------------|---------------|--------------|---------------------|
| AQD-400-LT924-OLED | 12 ~ 24V DC   | 0.1 ~ 9.9     | DMX512 / RDM | 24CH x 43 - Max 72A |

Specifications subject to change, always check website for the latest details.

# AQD-400-LT932-OLED

## TECHNICAL

**Product Code** AQD-400-LT932-OLED **Modes** Dimming / CT / RGB / RGBW **Output Power** (0 ~ 36W...72W x 32CH Max. 2304W)

**DMX Interface** XLR-3, WLR-5, RJ45, Green Terminal **Grey Level** 8 Bit (256 levels) / 16 Bit (65536 levels) **Photoelectric Isolation** Yes

**Protection** Short Circuit / Over Load **Warranty** 2 Year Aqualux Warranty

| Product Code       | Input Voltage | Dimming Curve | Input Signal | Load                |
|--------------------|---------------|---------------|--------------|---------------------|
| AQD-400-LT932-OLED | 12 ~ 24V DC   | 0.1 ~ 9.9     | DMX512 / RDM | 32CH x 3A - Max 96A |

Specifications subject to change, always check website for the latest details.

**"Success in any endeavor requires single-minded attention to detail and total concentration".**

- Willie Sutton (aka, Slick Willie, the famous bank robber).

# The Glossary of Lighting Terms

## Luminous Intensity (candela, cd)

1 cd = 1 lm / sr.

Luminous intensity is the light emitted in a given direction by a source. It is measured in candela (cd). The candela is an SI base unit from which other lighting related units are derived. The candela is defined as "the luminous intensity, in a given direction, of a source that emits monochromatic radiation of frequency 540 x 10<sup>12</sup> Hz and that has a radiant intensity in that direction of 1/683 W per steradian."

## Luminous Flux (lumen, lm)

1 lm = 1 cd . 1 sr

Luminous flux is the total amount of light emitted from a source in all directions. It can be used to approximate the "brightness" of a source, given that it is an average of the visible portion of the spectra emitted by a light source weighted by a function known as 'v-lambda' that describes the human visual systems sensitivity to light of different wavelengths. The lumen is a derived unit defined as 1 candela emitted in 1 unit solid angle, or steradian.

## Radiant Flux (W)

The radiant flux of a light source is a measure of the total power emitted by a source across the entire electromagnetic spectrum, including non-visible portions such as UV and IR. In lighting, radiant flux is used in order to determine the luminous efficacy of a light source.

## Luminous Efficacy (lm/W)

The luminous efficacy of a light source is determined by dividing the luminous flux by the radiant flux. The resulting fraction or coefficient describes the degree to which a source emits radiation in the visible or 'useful' part of the spectrum for lighting purposes. Energy emitted in wavelengths outside the visible portion of the spectrum reduces the overall luminous efficacy of a light source.

## Illuminance (lux, lx)

1 lx = 1 lm/m<sup>2</sup>

Illuminance is the light incident on the surface of a plane. It is a derivative unit where 1 lux = 1 lumen spread over 1 square meter. Illuminance can be further classified as perpendicular or horizontal illuminance, when needing to differentiate in the analysis of a lit environment. The inverse square law can be used to calculate the lux incident on a plane with a known source intensity and distance.

## Luminance (cd/m<sup>2</sup>)

Luminance is the light emitted from or reflected from a surface and approximates the brightness. It is dependant on the luminance of incident light and the reflectance of the surface. It is also commonly used to measure the brightness of a monitor or display.

## Color Rendering

The colour rendering ability of a light source is the degree to which the source alters the appearance of an illuminated object relative to the appearance of the object under a reference illuminant. The most commonly used system for measuring this is the Colour Rendering Index (CRI). A series of coloured patches are evaluated under the source illuminant and an average calculated and indexed to a score (Ra) out of 100. Although in widespread use, there are several issues with the CRI system. An improved standard is TM-30 which is now available.

## CCT

The colour temperature of a light source is a measure used to describe the appearance of a white-light source. 'Cool' sources are said to have a higher CCT (above 5000K) whilst 'Warm' sources have lower temperatures (below 3000K). It is referred to as correlated colour temperature because the appearance of the light source is being compared to that of an 'ideal' black-body radiator with a similar surface temperature measured in kelvin (K).

## Beam Angle (FWHM)

Full Width Half Maximum (FWHM) is an expression often found in the specification of LED optical systems. It refers to the width of the beam where the intensity is 50% of the maximum. This is typically measured by a goniophotometer during standard photometric testing. Some manufacturers may use different systems for specifying optical beam performance.

## Voltage Drop

Voltage drop in landscape lighting is the degree to which the starting voltage decreases over a given length of cable as a function of both the current load (A) and the resistance (Ω) of the cable. If the proper cable is not selected, voltage drop can produce faults such as low output or flickering lights. Selecting luminaires with the Aqualux MultiVoltage™ internal driver and using a 24V power supply can mitigate many of these issues, allowing for cheaper and more flexible installation.

## LM-80

The LM-80 standard is the IESNA approved method for determining lumen maintenance of LED light sources, e.g. how quickly the light output of an LED source degrades over time. It deals with actual measurements only.

## TM-21

TM-21 is a way of taking LM-80 data and making useful extrapolations in order to calculate longer LED lifetimes, given that testing for more than 10,000 hours is impractical. It is the TM-21 method that lets LED manufacturers determine the L70 and L80 lifetime expectancies of their LEDs.

## TM-30

TM-30 is the official replacement for the previous system (CRI) of determining the ability of a light source to accurately render colour in comparison to a reference source. Although not widely spread, TM-30 measurement is expected to be the future of CRI standards.

## LM-79

The LM-79 test report provides details about the performance of a total luminaire package, including wall-to-lumen efficacy, luminous flux, luminous intensity distribution and CCT / CRI details. It is the most common "lighting test report" available for many light fittings.

## IES File

An IES file is a digital representation of the zonal luminous intensity distribution of a light source. This file can be used by lighting software to accurately render the spread of light from a source to determine if the fitting provides the required illumination.

## Integrating Sphere

An integrating sphere is a device used to measure total luminous flux of a source. Comprised of a spherical housing the inner surface is coated with a highly diffuse paint. When a light is shone in through the aperture, the internal surface "integrates" the light into an average which a calibrated sensor can then use to determine the total flux.

## SPD

The Spectral Power Distribution "SPD" of a source represents the distribution of the radiant power throughout the visible spectrum. Usually defined in 5nm increments it can be used to determine the luminous efficacy of a light source and its colour rendering properties.

# Aqualux LED Lamps

## A complete range designed for landscape lighting

- True MR16 GX5.3 Form, Fits most MR16 / GX5.3 Luminaires.
- 4W High-Power LED technology, thermally optimised for enclosed fittings.
- 3000K / 5700K / Amber / Red / Green / Blue for Lighting design flexibility.
- 12 ~ 24V AC/DC MultiVoltage™ for ultimate installation flexibility.
- New ultra-spot 10D model for highlighting columns, trees and features.

# Wiring Materials and Corrosion

## Parallel Wiring

All Aqualux LED luminaires are designed to be wired in parallel. This is the most common electrical wiring approach used for standard residential & commercial installations.

## Series Wiring

For systems where internal drivers have been removed in order to provide dimming functionality series wiring is required, along with a Constant Current PSU.

## Aluminium (6063)

Aluminium can be grouped into two different categories with respect to outdoor lighting - Machined or Cast. Machined, 6000-series aluminum is a superior alloy and can be effectively anodized, a process which integrates a layer of extra-hard aluminium oxide into the surface of the metal and protects against corrosion.

- Durable material (yacht masts, rock-climbing hardware etc).
- Minimal maintenance / good thermal conductivity.
- Variety of colours available.

## Brass

An alloy of tin & copper, brass is a material in common use for a wide variety of outdoor light fittings. Highly resistant to corrosion, brass will oxidize lightly over time but will generally not degrade structurally even in highly corrosive environments. Most brass fittings are generally cast and then machined.

- Very durable material.
- Available in different surface finishes.

## Copper

Copper is a popular option for more traditional settings and will naturally oxidize over time, turning a dark green colour as the metal reacts with oxygen in the air, unless it is continuously polished. Copper is one of the most expensive materials used in the construction of light fittings but also one of the most enduring.

- Copper is a traditional look, will age naturally.
- Will last the longest with minimal maintenance.
- Variety of surface finishes available.

## Stainless Steel

Stainless Steel is a popular choice for luminaire construction. Featuring resistance to corrosion, Stainless Steel for luminaire construction comes in two common grades, 304 & 316 ("Marine Grade"). Stainless Steel must be maintained in order for it to retain its "stainless" appearance. Tea staining, dirt, salt and even rust can build up on any type of "Stainless" fitting unless it is properly maintained by wiping it down every few months with a damp cloth.

- Reasonably durable material.
- Requires maintenance to avoid tea-staining.
- Can be electro-polished to improve corrosion resistance.

## Corrosion Control - Galvanic Table

The Galvanic Table lists metals in the order of their relative activity in sea water environment. The list begins with the more active (anodic) metal and proceeds down to the least active (cathodic) metal of the galvanic series.

Galvanic series relationships are useful as a guide for selecting metals to be joined, will help the selection of metals having minimal tendency to interact galvanically, or will indicate the need or degree of protection to be applied to lessen the expected potential interactions.

Generally, the closer one metal is to another in the series, the more compatible they will be, i.e., the galvanic effects will be minimal. Conversely, the farther one metal is from another, the greater the corrosion will be.

# IP/IK Ratings and CCT Guide

## IP Ratings

The IP (Ingress Protection) rating system provides a means of classifying the degrees of protection from foreign bodies and liquids afforded by electrical equipment and enclosures. The degrees of protection against the ingress of foreign bodies and liquids are indicated by the first two numerals as detailed in the table below.

| 1ST NUMBER |   |
|------------|---|
| 0          | No Protection   |
| 1          | Protected against ingress of objects => 52mm in diameter.                   |
| 2          | Protected against ingress of objects => 12.5mm in diameter.                 |
| 3          | Protected against ingress of objects => 2.5mm in diameter.                  |
| 4          | Protected against ingress of objects => 1mm in diameter.                    |
| 5          | Dust Protected  |
| 6          | Dust Tight  |
| 2ND NUMBER |   |
| 0          | No Protection   |
| 1          | Protected against vertically falling drops of water.                        |
| 2          | Protected against falling drops of water, when enclosure tilted 15 degrees. |
| 3          | Protected against spraying water.   |
| 4          | Protected against splashing water.  |
| 5          | Protected against water jets.   |
| 6          | Protected against powerful water jets.                                      |
| 7          | Protected against the effects of temporary immersion in water.              |
| 8          | Protected against the effects of continuous immersion in water.             |

## IK Ratings

The IK rating system was introduced in October 1995 as EN62262. It describes the degree to which an electrical enclosure can protect the internal equipment from the effects of mechanical impact.

|             |   |
|-------------|---|
| <b>IK00</b> | <b>Not protected</b>  |
| <b>IK01</b> | <b>Protected against 0.14 joules impact.</b><br>Equivalent to impact of 0.25 kg mass dropped from 56 mm above impacted surface.   |
| <b>IK02</b> | <b>Protected against 0.2 joules impact.</b><br>Equivalent to impact of 0.25 kg mass dropped from 80 mm above impacted surface.    |
| <b>IK03</b> | <b>Protected against 0.35 joules impact.</b><br>Equivalent to impact of 0.25 kg mass dropped from 140 mm above impacted surface.  |
| <b>IK04</b> | <b>Protected against 0.5 joules impact.</b><br>Equivalent to impact of 0.25 kg mass dropped from 200 mm above impacted surface.   |
| <b>IK05</b> | <b>Protected against 0.7 joules impact. E</b><br>Equivalent to impact of 0.25 kg mass dropped from 280 mm above impacted surface. |
| <b>IK06</b> | <b>Protected against 1 joules impact.</b><br>Equivalent to impact of 0.25 kg mass dropped from 400 mm above impacted surface.     |
| <b>IK07</b> | <b>Protected against 2 joules impact.</b><br>Equivalent to impact of 0.5 kg mass dropped from 400 mm above impacted surface.      |
| <b>IK08</b> | <b>Protected against 5 joules impact.</b><br>Equivalent to impact of 1.7 kg mass dropped from 300 mm above impacted surface.      |
| <b>IK09</b> | <b>Protected against 10 joules impact.</b><br>Equivalent to impact of 5 kg mass dropped from 200 mm above impacted surface.       |
| <b>IK10</b> | <b>Protected against 20 joules impact.</b><br>Equivalent to impact of 5 kg mass dropped from 400 mm above impacted surface.       |

## CCT - Correlated Colour Temperature

Color Temperature is the chromacity of a light source as determined by it's position on an imaginary line drawn through a colour space. This line is often referred to as a 'blackbody locus', as it is the locus (line) resulting from graphing the chromacity of a perfect blackbody radiator as it changes temperature. In general, "hotter" CCT's appear "cooler/bluer" whilst "colder" CCT's appear "warmer/more red".

| CCT     | Example                      |
|---------|------------------------------|
| 2000°   | Gaslight                     |
| 2470 °  | 15 watt incandescent bulb    |
| 2565°   | 60 watt incandescent bulb    |
| 2665°   | 100 watt incandescent bulb   |
| 2755°   | 500 watt incandescent bulb   |
| 2900°   | 500 watt Krypton bulb        |
| 3100°   | Projector type filament bulb |
| 3250°   | Photo Flood                  |
| 3400°   | Halogen                      |
| 3900°   | Carbon arc                   |
| 4200°   | Moonlight                    |
| 4700°   | Industrial smog              |
| 5100°   | Hazy weather                 |
| 5500°   | Sun 30° above horizon        |
| 6100°   | Sun 50° above horizon        |
| 6700°   | Electronic Flash             |
| 7400°   | Overcast sky                 |
| 8300°   | Foggy weather                |
| 30,000° | Blue sky                     |

# Aqualux Warranty September 2021

## Aqualux Limited Warranty Information

Aqualux sources, designs, and manufactures advanced landscape lighting of many different varieties. We utilise the highest-grade components manufactured inhouse as well as sourced from around the globe and assembled in our quality-controlled Sydney, Australia facility.

From time to time, for a variety of possible reasons, our products may experience an issue after installation. This page details the various warranties our products carry, the causes of product failure that we have experienced over time, and the steps necessary to make a warranty claim should that be necessary.

## Fit-for-Purpose & Installation Requirements

All warranties offered in addition to the statutory requirement of 1 Year are done so on the condition that Aqualux lighting products are fit-for-purpose and installed professionally by qualified persons and that all guidelines and requirements are followed.

Fit-for-purpose in this context refers to the intended application our products are designed for which is residential and commercial garden & landscaping environments. Products not specifically designated IP68 are not fit for submersion, either intended or accidental.

## Remote, Difficult & Unusual Installations

Where Aqualux products are installed in unusual, remote, or difficult to access locations and environments, this is done so at the end user's risk. Where warranty issues arise, Aqualux is limited in its liability to the cost of repairing or replacing the product only.

Examples of remote & unusual installations include (but are not limited to) jobs that require scissor lifts, traffic management, significant labor, or the removal of paneling or other secondary installation materials. If you are uncertain, please contact us to discuss 1300-662-644 / sales@aqualux.com.au

## AQS Series Strip Lighting

Please pay particular attention to our fit-for-purpose and unusual installation warranty notes when designing with AQS LED Strip Lighting. Whilst LED strip lighting allows for unique and previously impossible lighting effects to be achieved, it is still a sensitive electronic product that is potentially subject to failure through a variety of modes including (and most often) improper handling during installation.

All Aqualux AQS products are tested before they leave our factory. We strongly advise customers to test the product prior to installation. Aqualux is not liable for any costs associated with accessing or replacing the AQS-Series strip.

## Warranty Claims Procedure

To make a claim for service to repair or replace a product under an Aqualux warranty, contact the original reseller and/or installer of the product. They will generally be able to process the claim on your behalf. If your original reseller is no longer in business or you are not sure who it may have been, please contact us directly with a photo of your product and a summary of the issue. Aqualux may elect to repair or replace your product depending on the nature of the fault and product serviceability.

## Applicable Warranty Periods

If you cannot find your product below, please contact us. Warranty periods are subject to change without notice - this will not affect an existing purchase.

| Product code or family      | Warranty (years) | Product code or family                      | Warranty (years) |
|-----------------------------|------------------|---|------------------|
| AQL-450, 451 & 452 " Turbo" | 5 years          | AQL-455 "Eco"                               | 2 years          |
| AQL-400 to AQL-420          | 5 years          | AQL-510, 520, 530, 540, 565 & AUL-03 AUL-04 | 7 years          |
| Lumena / Lumena Pro Range   | 7 years          | AQL-600 Range                               | 3 years          |
| AQL-910, 911, 912 & 913     | 3 years          | AQL-931 & AQL-933                           | 5 years          |
| AQA Artisan Range           | 10 years         | Festoon and Fairy Lights                    | 3 years          |
| AQS Strip Light             | 3 years          | Aquatran AQO AC                             | 10 years         |
| Aquatran AQD DC             | 5 years          | AGL Globes                                  | 3 years          |
| Other AQD Control Gear      | 3 years          |   |                  |

## Cable Termination Requirements

Cable terminations and joins must be IP-rated for this warranty to apply. Joins and connections that are not fit-for-purpose or that are manifestly unsuitable will not be serviced by Aqualux and any product failure arising from such terminations will not be claimable under this warranty.

Please refer to the cable join / termination guide available on our website for more informatoin.

## Quick Connect Cables

Where a product has a quick connect cable, anti-siphon device, or other feature(s) it/they should never be removed. Doing so will void your warranty and in the event of product, failure makes the job of repair/replacement unnecessarily more difficult and costly. If you are concerned one of these features may impact your ability to install our products contact us prior to your order placement.

## The Fine Print

Aqualux Lighting is a brand wholly owned by Telectran International. Telectran International Pty. Ltd. ("Telectran") warrants to the purchaser of products described herein that they be free from defects in material and workmanship for a period commencing at the date of purchase and expiring at the end of the period specified (the "warranty period").

No other warranty, whether express or implied, including any warranty of merchantability or fitness for a particular purpose, shall exist in connection with the sale or use of such products.

Defects that are, in the sole judgment of Telectran, the result of an accident, misuse, abuse, neglect, mishandling, misapplication, faulty installation, unauthorized repair, modification, or acts of God will not be covered by this warranty.

Telectran shall not be liable for incidental or consequential damages, including but not limited to labour costs or lost profits resulting from the use of or inability to use the goods or from the goods being incorporated in or becoming a component of any other product. Without limiting the generality of the foregoing, Telectran will not be responsible for labour costs involved in the removal of goods or the installation of replacement goods.

If a problem develops with a product during the warranty period call or email us. We may be able to help you identify specific problems and possibly solve them before the unit is returned to us for repair or replacement. In any case, **DO NOT RETURN ANY GOODS WITHOUT OBTAINING A RETURN NUMBER** and instructions from us. Telectran cannot be responsible for damage due to shipping or improper packaging when returning goods. Please see our returns policy for further information.

Upon receipt of a claim, Telectran shall inspect the part or parts claimed to be defective, and we shall repair, or at our discretion, replace, free of charge, any part or parts which we determine to have been defective.

# No dipping

Voltage drop can be measured in a circuit with a standard Multimeter. Better still, the voltage drop can be calculated in advance using our online Voltage Drop Calculator.

## Voltage Drop Calculator

### System Settings

|                |                      |                  |                                  |
|----------------|----------------------|------------------|----------------------------------|
| System Voltage | Maximum Voltage Drop | Number of Lights | Cable Options (Multiple Choices) |
| 24V            | 10%                  | 5                | 1mm <sup>2</sup>                 |

### Cable Distance & Light Power Settings

| Distances to Lights (Meters) | Lights Power (Watts) | Section Power (Watts) |
|------------------------------|----------------------|-----------------------|
| Meters to 1st Light          | Light Power(W)       | 0                     |
| 1st Light to 2nd Light       | Light Power(W)       | 0                     |
| 2nd Light to 3rd Light       | Light Power(W)       | 0                     |
| 3rd Light to 4th Light       | Light Power(W)       | 0                     |
| 4th Light to 5th Light       | Light Power(W)       | 0                     |

Calculate

## Ohm's Law

An important mathematical formula that electricians and physicists use to determine certain measurements in a given circuit. The formula is  $V = I \times R$  where  $V$  is the voltage, measured in volts,  $I$  is the amount of current measured in amps or amperage and  $R$  is the resistance, measured in ohms.

# We're everywhere

While we may not sell direct to the public, that doesn't mean our fittings and expertise are not readily available. Call our friendly staff who can answer your technical questions and direct you to your nearest reseller.

|     |    |      |                   |

**GENERAL NOTES:**  
 These drawings shall be read in conjunction with all specifications and other construction drawings and specifications and with such written instructions as may be issued during the course of the project.  
 Dimensions shall not be obscured by cutting the drawings; the builder shall check all dimensions of the job and shall refer all discrepancies to the architect before the work proceeds.  
 All workmanship and materials shall be in accordance with the requirements of the current codes, including amendments of the relevant AS standards and AS codes of practice except as varied by the contract documents and by the laws and requirements of statutory authorities.  
 Installation is to comply with the approval of the architect.

# Creating the Legend

The new Aqualux 'AQL' product code is created by choosing options directly related to your fitting. Codes are automatically generated using our **'Configure order code'** filter system and includes a downloadable datasheet, which can be found at [www.aqualux.com.au](http://www.aqualux.com.au)

**Note:** Not all fittings come with every variant displayed here, please check the Aqualux website for product variations

# Neon Flex Feature Guide

With so much flexibility, Neon Flex not only bends to your needs, it comes with a mind boggling number of options. To help choose the right Neon Flex for the project, we've put together a simplified guide.

# Dimming and controlling aqualux lighting

1. If you want to dim Aqualux lights but you do not already have a dimming control system, we recommend a standalone DALI solution as the preferred option. See wiring diagram 3.

2. If you already have a dimming control system, you will need to check the table on Page 2 in conjunction with the Aqualux website to determine if the Aqualux product you want to control is compatible.

The dimming capability of Aqualux lighting products is determined by the internal control gear and power source requirements of the particular product.

Selecting the right option is important if you wish to ensure compatibility with your lighting control system.

To determine Aqualux dimming compatibility, locate the control gear code 'B' in your product code.

Then refer to the table on Page 2 to determine if the product is dimmable and what external control gear or power source requirements may be needed.

## AQL-XXX-AA-BCCCDDEEF

Code and table definitions

### CONTROL GEAR (B)

Code 'B' in our product code scheme determines the input voltage, dimming capability and wiring requirements.

### INPUT VOLTAGE

Refers to the voltage and current type needed to supply the light.

### DIMMING

If the driver is capable of dimming, what style of dimming it is and other details.

### RECOMMENDED HARDWARE

Example equipment required to operate the particular configuration and any dimming capability.

### NOTES

Particular instructions directly related to the fitting and selected components.

### WIRING DIAGRAMS

Overview of the electrical circuit, the relative position and arrangement of fittings and control gear.

The control and dimming of lighting products is not as straightforward as it once was with halogen or incandescent lighting. There are multiple options and methods for dimming and control of LED lights.

Once manufactured, dimming compatibility cannot be changed without returning the product to our factory for modification. Refer to the table at the end of this document for more information on dimming control systems.

While Phase-cut/TRIAC dimming systems can still work with some LED products, there are also other legacy systems such as 0-10V (developed for fluorescent lighting) and more modern digital lighting control systems such as DALI and DMX that are in many ways more suitable for LED lighting control.

### Aqualux 10V PWM Dimming

Aqualux fittings with 10V PWM dimming are capable of dimming if the PWM signal wire is connected to a compatible 10V PWM source such as the DAP-04 DALI interface. See page 4 for more information.

Don't hesitate to contact us if you have any questions.

## CBUS Dimming

The ability of CBUS to dim LED lighting system depends on the modules available within the CBUS system and the type of dimming required by the LED driver or power supply.

Dimming with CBUS:

- Use a Phasecut CBUS dimming module with a compatible Phasecut power supply
- Use a CBUS/DALI gateway and a DAP-04 for compatibility with Aqualux 10V PWM dimming.

### Universal (Phasecut) Dimming Module

*C-Bus DIN Rail Mounted DALI Gateway for 2 Dali Networks* Item Number: 5502DAL

### CBUS / DALI Gateway

*DIN Rail Mounted, Universal, 240V AC, 4 Channel, 2.5A* Item Number: L5504D2UP

# Technical Information

## PWM (POWER) DIMMING

PWM power dimming directly modifies the output of a power supply via PWM (Pulse-width modulation). It controls how often the current is on or off hundreds of times per second.

As the human eye cannot perceive frequencies this fast, the effect is an apparently stable variation of the output light level.

PWM power dimming can be achieved by using compatible power supplies that will require their own dimming control input. It can also be achieved by using a PWM module that sits between the power supply and lighting product and modifies the power to control the PWM dimming.

PWM Power dimming is common in LED strip lighting products and operates across any number of channels (eg. White, Tuneable White, RGB, RGBW).

The benefits of PWM power dimming are that it is relatively straightforward requiring no additional wires, that it works independent of the load rating of the power supply and that it does not require additional signal wires.

The drawbacks include that the LED forward voltage must be closely matched (linear) with the power supply voltage - Many discrete LEDs require voltages that are not common and are difficult to control in a linear fashion.

This is why PWM Power dimming is most commonly used with LED Strip lighting type products where multiple LEDs can be combined to create a 12V or 24V LED circuit.

## PWM (SIGNAL) DIMMING

PWM Signal dimming directly controls the output current of a power supply, either an internal constant current driver inside a light fitting or an external constant current or constant voltage power source.

The driver or power supply requires a separate control signal wire that the PWM signal is delivered over. The PWM signal is then used by the driver to modify the output current to the LED.

The advantages of this approach are that multiple individual fittings can be controlled with the same dimming signal and that it operates independent of the internal LED voltage. A variety of types of fittings can be controlled in the same manner.

Many other forms of lighting control are in fact interfaces to a PWM Signal type of dimming, given that close to the LED a PWM signal of some sort will almost always be needed to modify the LED output.

## DALI

DALI (Digital Addressable Lighting Interface) is a modern lighting control protocol. It allows each device to be individually addressed and controlled.

The benefits of DALI are relative ease of deployment and commissioning, with each fixture or driver assigned an address and independently controlled.

The drawbacks include the requirement for additional components such as a DALI power supply and typically a master controller. Additionally, DALI wiring rules specify that the control cables (although ELV) must be treated as 240V.

This simplifies wiring in mains powered lighting systems but may complicate requirements in SELV systems.

Aqualux fittings that are DALI compatible typically use a DALI/PWM interface to provide this control. This means that control is available down to the power supply group rather than individual fitting.

## Technical Information

### DMX512

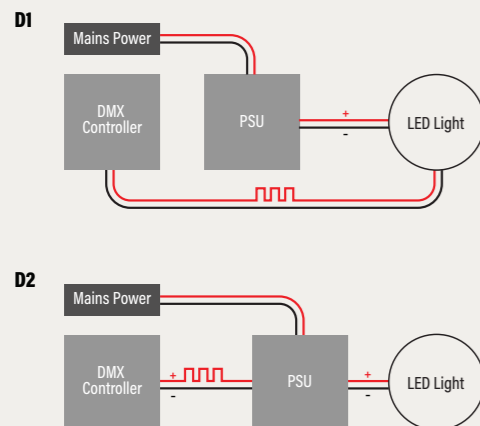

DMX (Digital Multiplex) is a common digital protocol for the control of entertainment lighting and architectural systems.

Developed initially for linking theatrical lighting and effects systems to central controllers, it has expanded to include many other functions.

DMX requires a separate set of control cables to carry the data signals from a central controller to the lighting control systems and power supplies. It can be used with both low voltage and mains lighting products as the control system is completely separate to the lighting power supply system.

The benefits of DMX512 are that it is a widely used and well understood system with many compatible control products. Very long signal cable runs are also possible, up to 1km or more. Wireless DMX equipment is also available.

The main drawback is that DMX requires additional control equipment and adds complexity to a system beyond what is typical for residential applications. Many fittings will also require an interface module to convert the digital DMX512 signal to PWM Signal.

### ARTNET

ArtNET is a protocol for transmitting DMX/RDM signals over Ethernet. It can make the deployment of a DMX solution a lot easier as it can utilise existing infrastructure.

### PHASE CUT / TRIAC

Phase cut dimming includes both TRIAC based dimming (leading edge) and trailing edge approaches.

There are also "universal" dimmers that can determine the most appropriate mode for the detected load. The benefits of phase-cut dimming are that it is simple to install and widely understood by most contractors.

The drawbacks include incompatibility with many LED products and varying performance that depends on the combination of dimmer, power supply and LED light.

Some manufacturers recommend only certain combinations of dimmers and power supply units.

### MESH NETWORKS (ZIGBEE, CASAMBI, SILVAIR)

There are a growing number of mesh network protocols intended for wireless control of lighting and other building systems. Casambi and Sil vair operate using Bluetooth mesh networks, whereas Zigbee utilises its own radio communication method.

Casambi in particular is growing in popularity and Aqualux will soon be able to offer a range of options for control of fittings and strip lighting with Casambi products.

# Keeping you grounded

We've put together a range of wiring diagrams covering many of our easy and some of our more complicated setups.

## Wiring Diagram

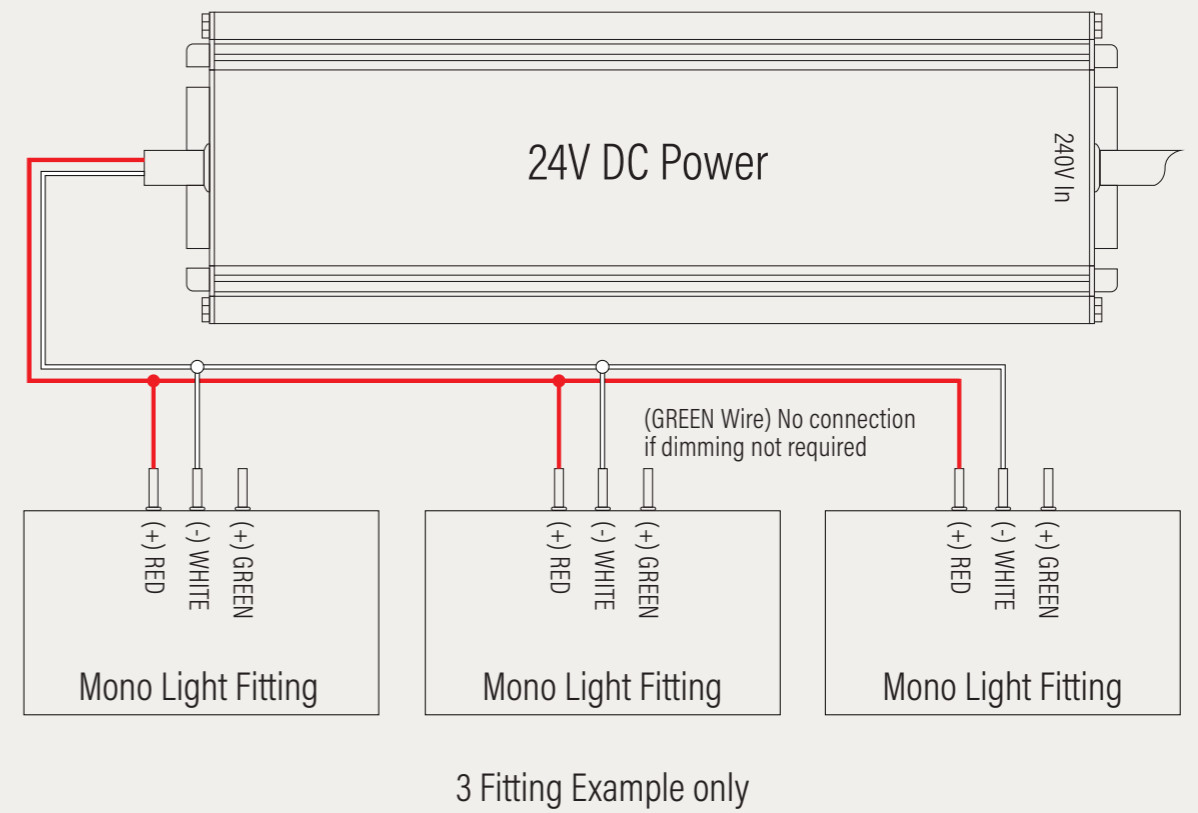

Mono - 12 ~ 24V AC - 2 wire

Wired in parallel (non polarity).

## Wiring Diagram

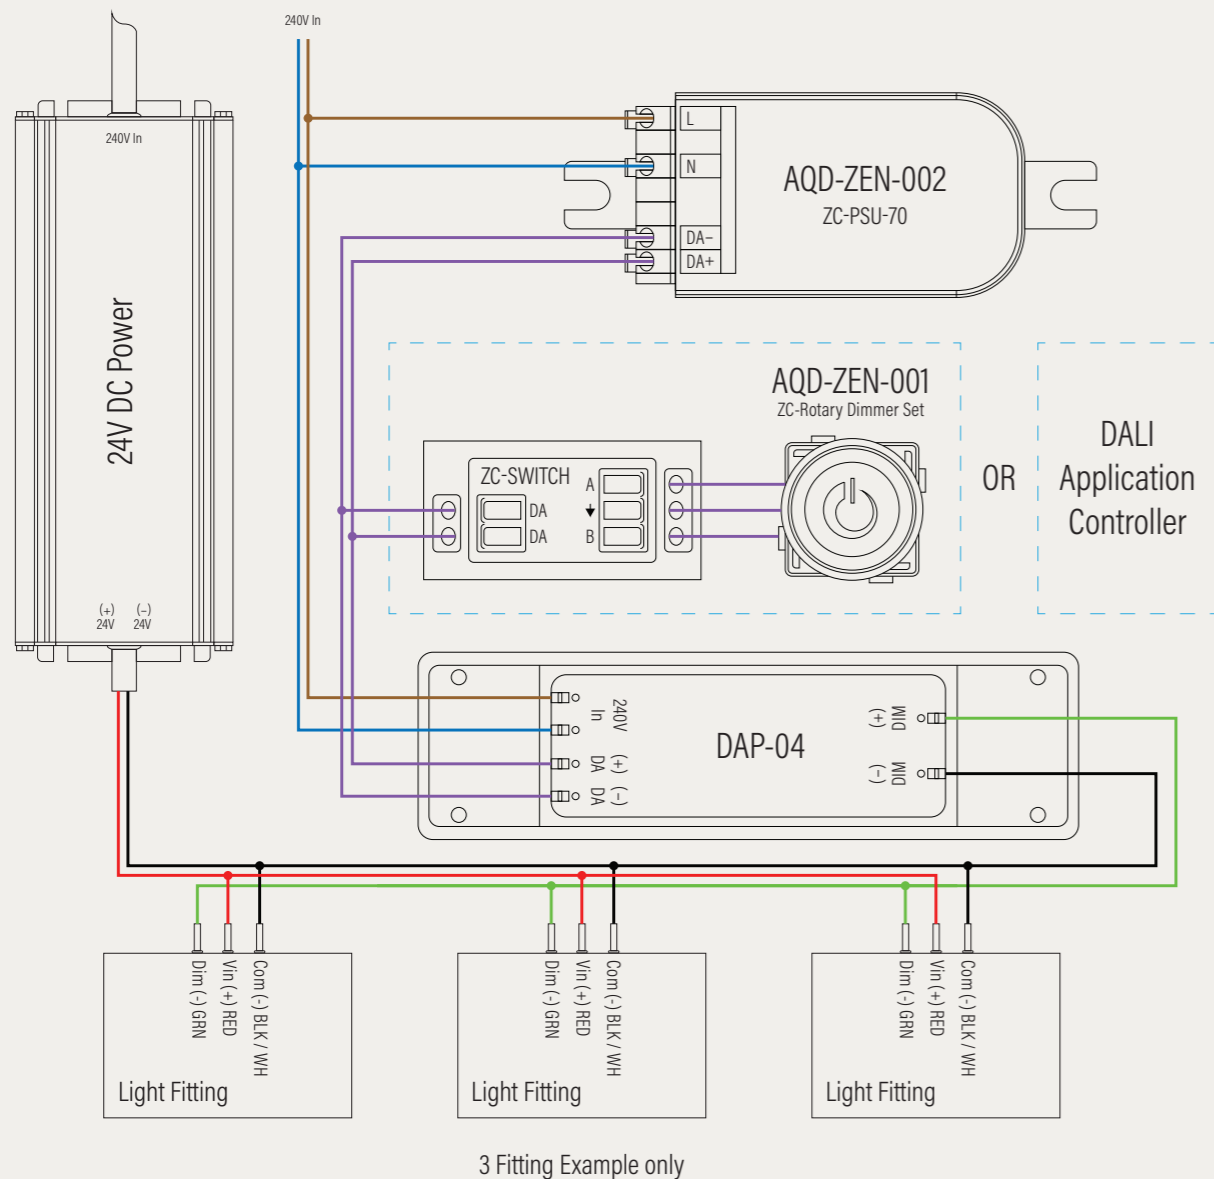

Mono - 24V DC - 2 Wire

For Lumena, Lumena Pro, Pheonix and Artisan Mono fittings with the 3 wire cable. Wired in parallel, no dimming.

## Wiring Diagram

Mono - 24V DC - 3 Wire - Dali Dimming - Aqualux Driver  
Lumena, LumenaPro, Phoenix & Artisan - Mono

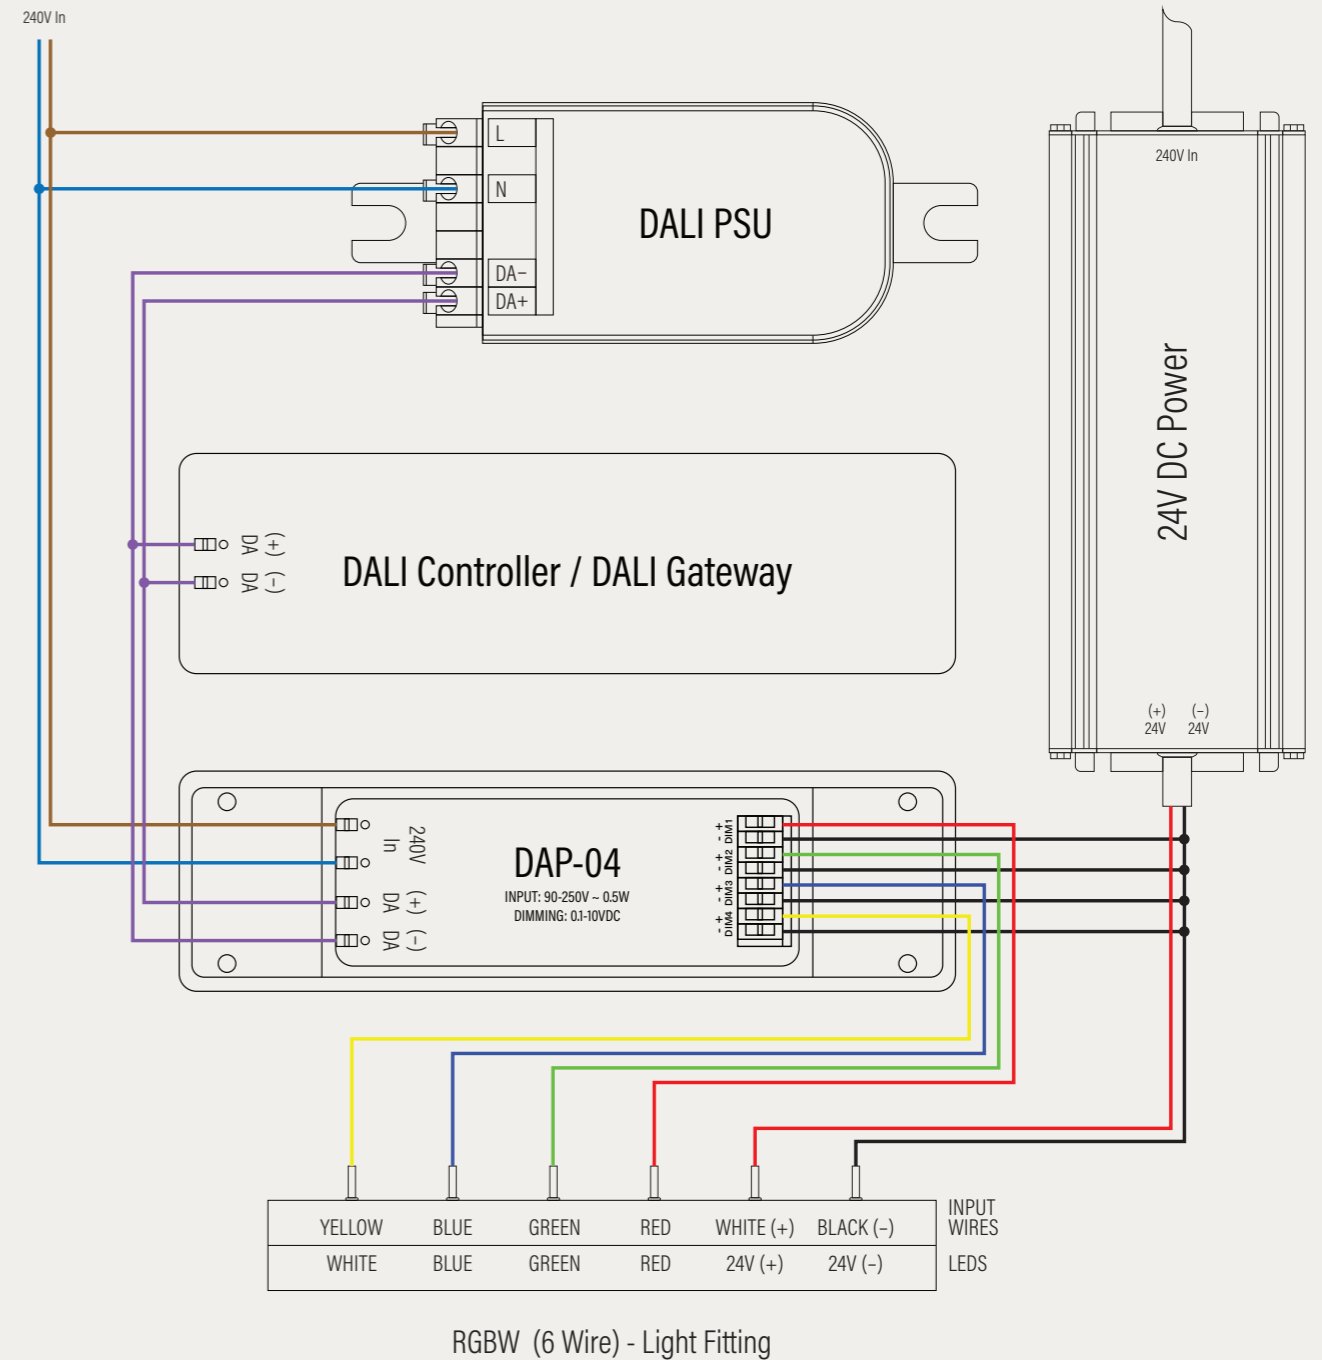

Dali dimming for mono fittings with 3 wire cable.

**Recommended Hardware:**

- AQD-ZEN-001
- AQD-ZEN-002
- AQD-MW-DAP-04
- AQD24-Power Supply to match your wattage

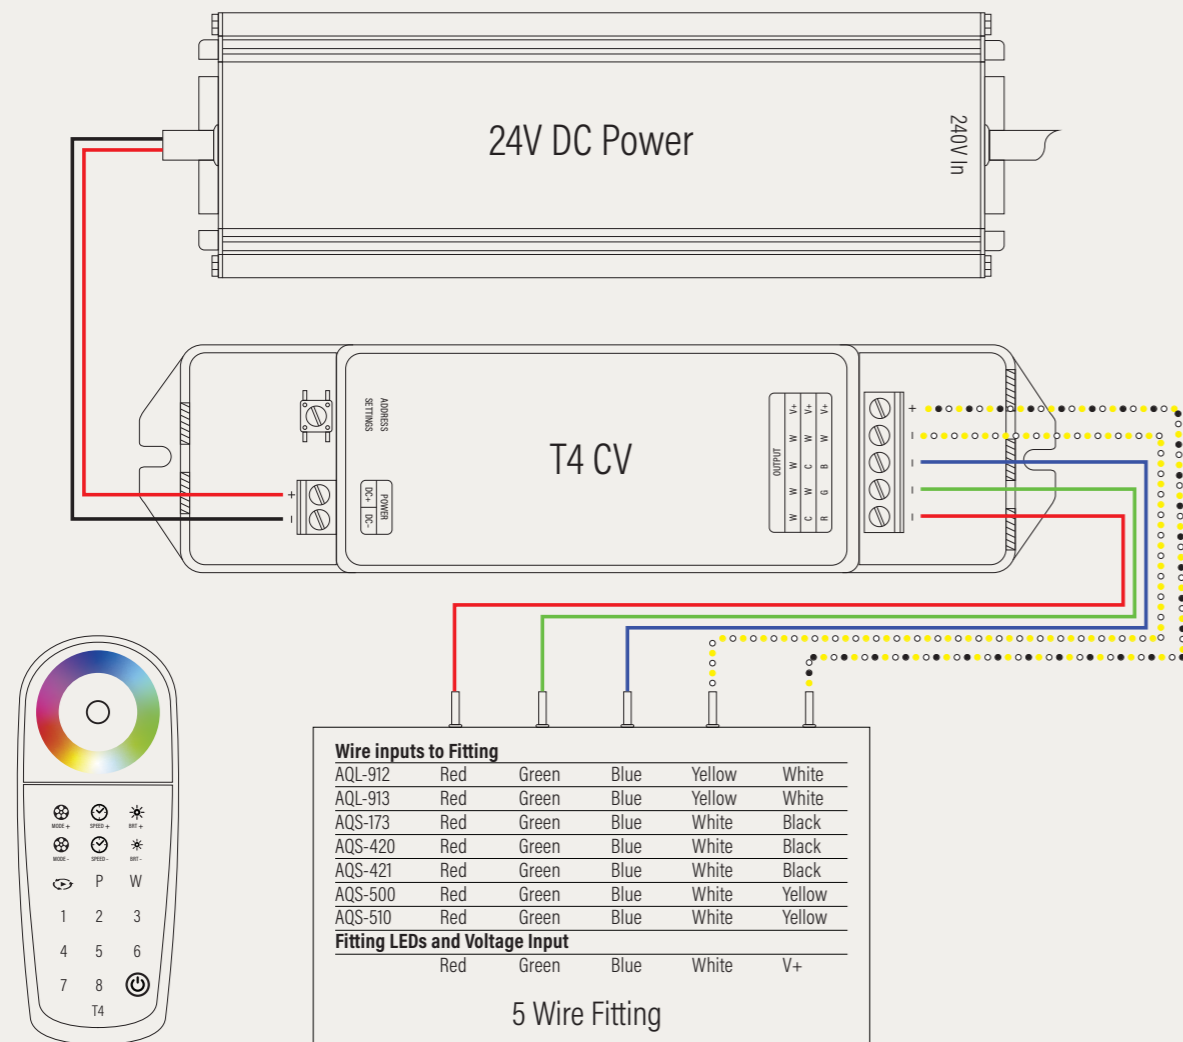

## Wiring Diagram

RGBW - 24V DC - 6 Wire - DALI Dimming

## Wiring Diagram

RGBW - 24V DC - 5 Wire - T4 Remote  
AQS-500, AQS-510, AQS-420, AQL-912 and AQL-913

Wireless 4 channel with zoning. Max 480W 4 channel @ 24VDC. Up to 8 Zones can be controlled from T4 Remote. RF Range 30m (Line of sight). Unlimited numbers of T4CV's can be added on each zone. Max 10m strip run for single end feed and 20m double end feed.

## Wiring Diagram

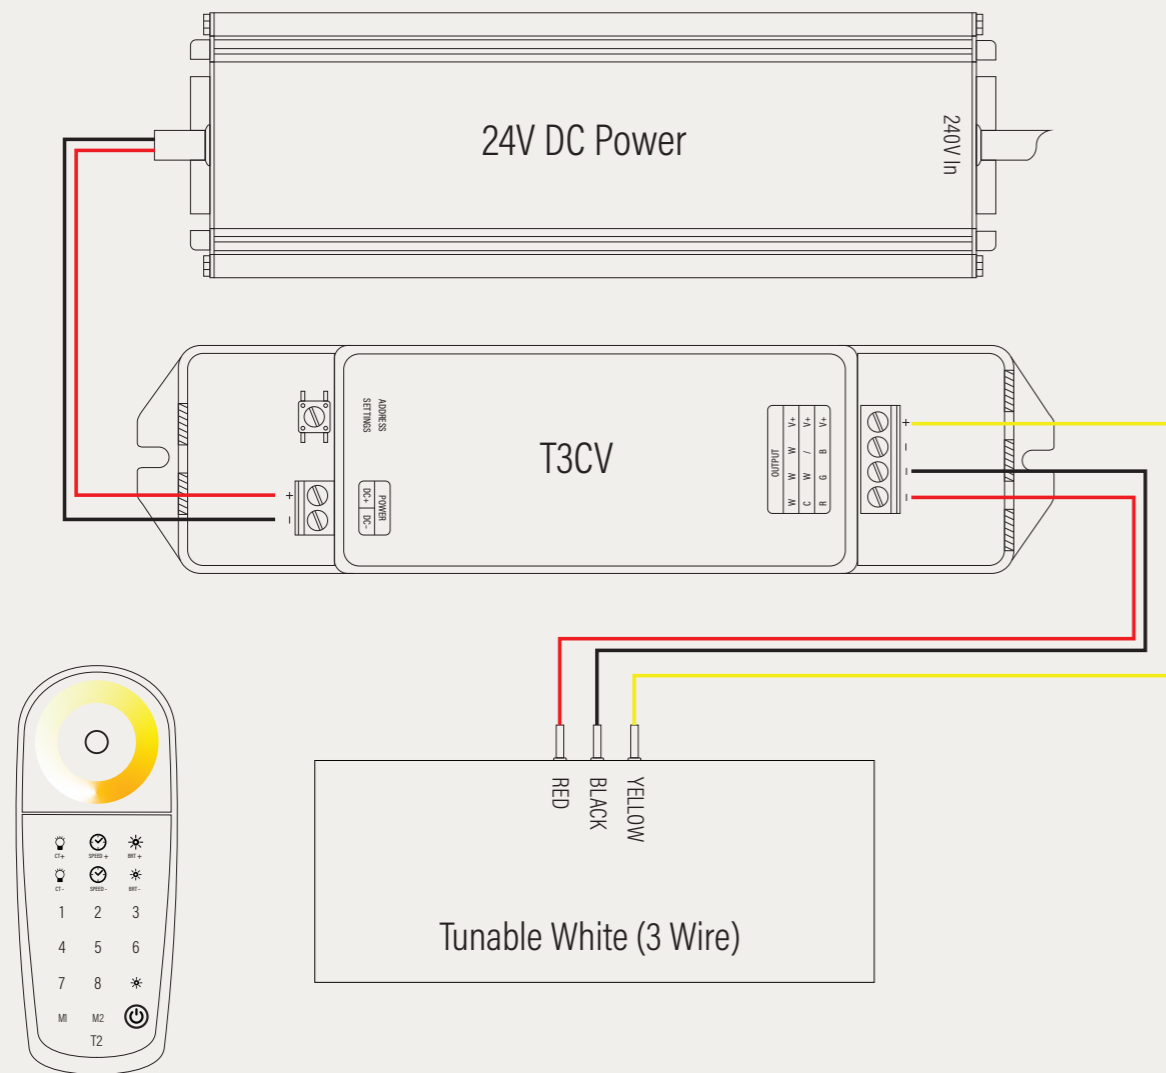

RGBW - 24V DC - 6 Wire - T4 Remote - Aqualux Driver  
Lumena, LumenaPro, Phoenix & Artisan - RGBW

Wireless 4 channel with zoning. Max 480W 4 channel @ 24VDC. Up to 8 Zones can be controlled from T4 Remote. RF Range 30m (Line of sight). Unlimited numbers of T4CV's can be added on each zone. For installations with a load greater than the controller/receiver capacity, the yellow V + wire can be wired directly to the positive + wire from the power supply which can allow up to 600W using a HLG-600H-24 power supply.

## Wiring Diagram

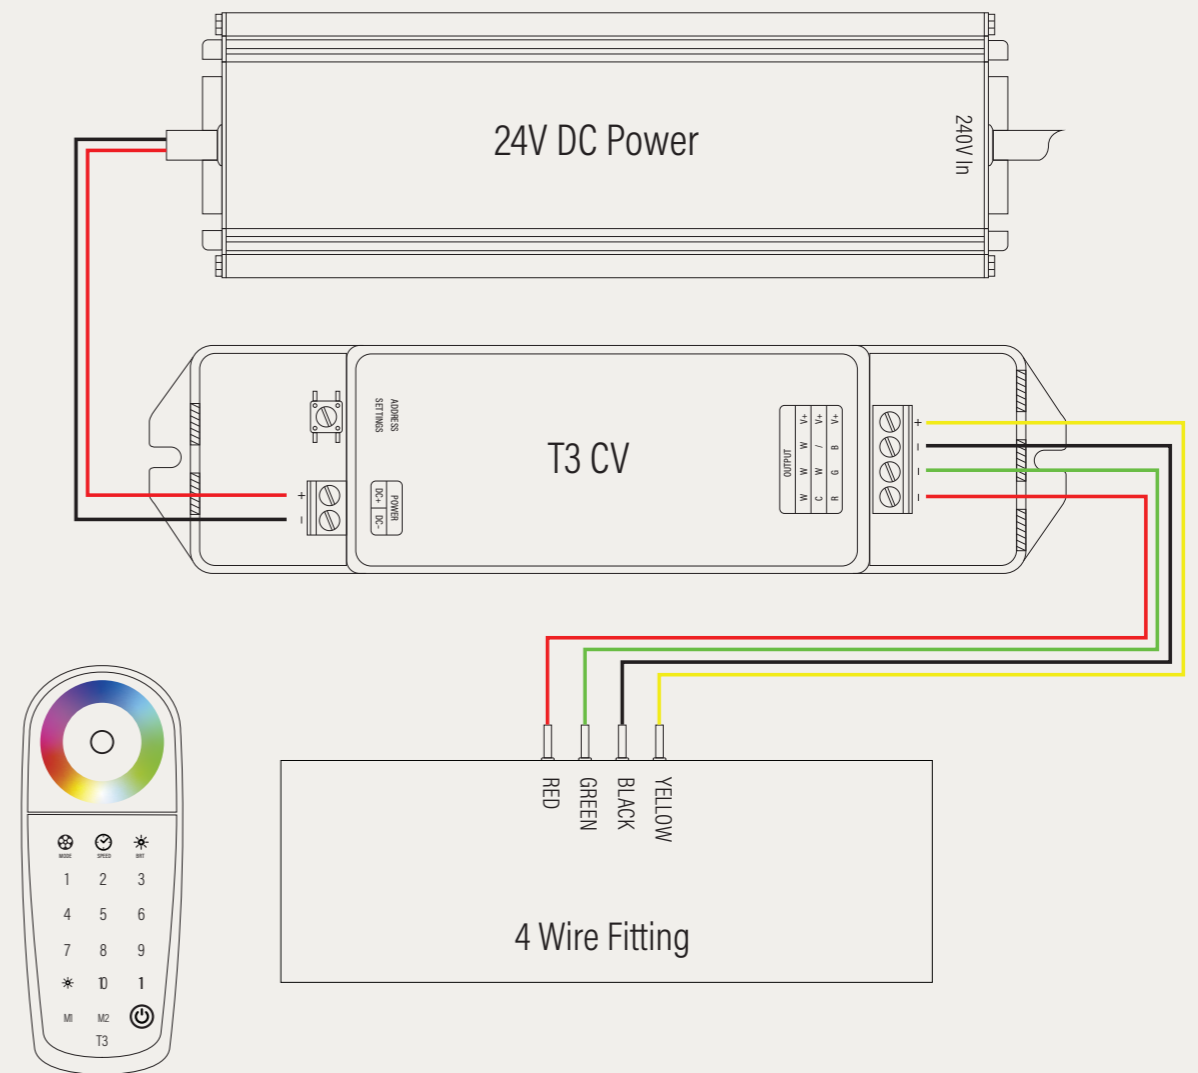

Mono Tunable - 24V DC - 3 Wire - PWM Dimming - T2 Remote

Wireless 2 channel CT setup with zoning. Max 432W 3 channel @ 24VDC. Up to 8 zones can be controlled from T2M remote. RF Range 30m (Line of sight). Unlimited numbers of T3CV's can be added to each zone. Max 5m strip run for single end feed.

## Wiring Diagram

RGB - 24V DC - 4 Wire - PWM Dimming - T3 Remote  
AQS-410 and AQS-420

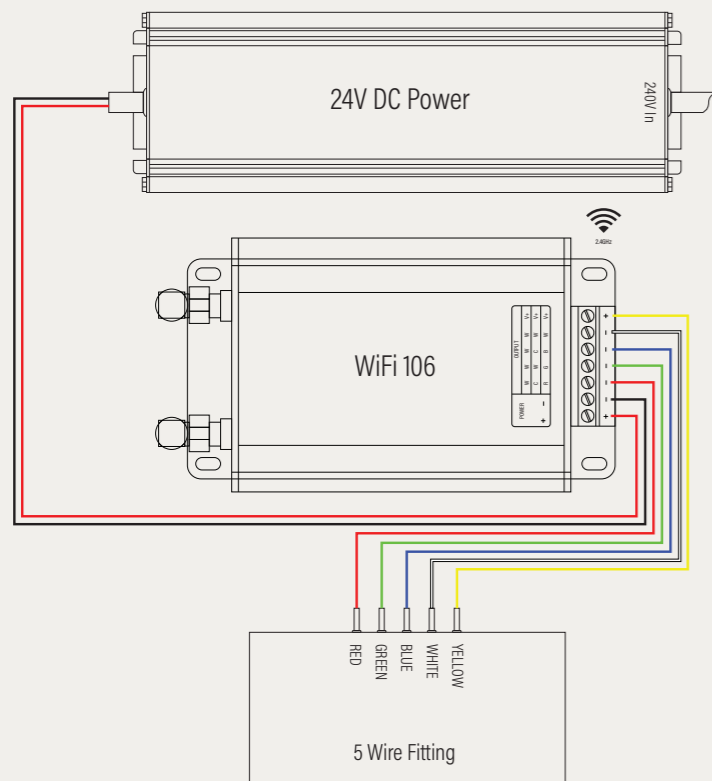

Wireless 3 channel with zoning. Max 432W 3 channel @ 24VDC. Up to 10 zones can be controlled from T3M remot. RF Range 30m (Line of sight). Unlimited numbers of T3CV's can be added to each zone. Max 5m strip run for single end feed.

## Wiring Diagram

RGBW - 24V DC - 5 Wire - WiFi 106 + F45A  
AQS-500 and AQL-900 Series

Setup allows for control from mobile or tablet from free Android or iOS app. Wall controllers and hand held remotes are also available to add to the system. Max 480W 4 channel @ 24VDC. Unlimited F45A's can be added to a zone.

Max 384W 4 channel @ 24VDC. Up to 12 Zones can be controlled from each Wifi-106. 16 Wifi-106's can be run on a Wifi network. RF Range 30m (Line of sight) can be extended with the addition of EBOXAP's (up to 8 AP's).

| Wire inputs to Fitting | Red | Green | Blue | Yellow | White  |

Setup allows for app control (needs to be on a wifi network), calender scene triggers, operation from control systems and scene triggering from external sources. 16 and 32 channel receivers available. Receivers can be daisy chained. Up to 128 individual floods per DMX universe with the appropriate amount of receivers. Up to 2 DMX Universes. Wall Controllers available.

# Wiring Diagram

RGBW - 24V DC - 5 Wire Dynamic Pixel DMX Dimming -USC 512C or Compatible  
AQS-500 and AQS-510

Setup allows for app control, calender scene triggers, operation from control systems and scene triggering from external sources. 18 Universes of DMX per S-Play Unit (Multiple units can be used for larger installations). 8 and 24 port Storm units available. Max 8m strip run for single end feed and 16m double end feed. Strip is directional (check cable entries and entry and exit tail lengths). Strip is addressable using DMX Writer.

## Wiring Diagram

Mono - Constant Current - 2 Wire - 1/10V Dimming  
Fittings with no internal driver

- Lights are connected in series, with the current flowing from one fitting to the next, from Positive (+) to Negative (-).
- Standard garden lighting cable can be used as long as each conductor (+/-) is identified and selected correctly at each fitting.
- Many cables have printed marks or molded features such as ribs to aid in conductor identification.
- Total circuit voltage must be correctly calculated. This is done by determining the forward voltage (Vf) of each fitting and multiplying by the number of fittings in the circuit. Circuit voltage must not exceed the max voltage of the constant current driver.
- Voltage drop is not an issue in constant current circuits as it is the current that is constant, not the voltage. The driver will increase the voltage of the circuit to compensate for losses up until the max voltage it is capable of.
- Ensure that the circuit voltage does not exceed SELV maximums for DC circuits, 120V as per AS/NZS 3000:2018.

## Order & Shipping Information

Please Email your order to [sales@aqualux.com.au](mailto:sales@aqualux.com.au)

Orders under \$300 (ex. GST) will be charged small order handling and delivery fee.

Orders above \$300 (ex. GST) will be delivered free Australia-wide.

We currently use three primary transport companies - Startrack Express, Couriers Please and Border Express. We may use alternative couriers as necessary.

When we ship your order, you will receive a shipment notification email with tracking numbers.

All shipments are dispatched from Sydney, Australia.

## Leadtime Information

Many Aqualux products are Made-to-Order whilst others are generally stocked at all times. Refer to the table below for general leadtime information, however if your order is urgent please give us a call.

| Product Group      | Stocking Group           | Leadtime to Ship     |
|--------------------|--------------------------|----------------------|
| Lumena             | Made-to-Order            | 5 - 10 Days          |
| Phoenix            | Made-to-Order<br>Stocked | 5 - 10 Days<br>1 Day |
